

**New Perspective Eye Care** recommends ALL patients have the internal health of their eyes evaluated routinely. This is performed with routine dilated eye exams and supplemented by OPTOS retinal imaging.

OPTOS retinal imaging is a non-invasive procedure and fast option to give the doctor a much broader and comprehensive view of the back of eye (retina). This scan helps the doctor to be as thorough as possible and can reduce the frequency that the doctor must dilate your eyes.

Certain eye conditions and problems still require the use of dilation drops for diagnosis and treatment, including diabetic exams, but this scan can supplement the doctor's examination and allow better comparison tools for future exams. The scan also allows you to view your retina yourself.

We are proud to offer this scan to all patients for your comfort, convenience and to maintain the highest level of eye care and health management.

A Screening Tool For:

Diabetic Retinopathy

Macular Degeneration

Glaucoma

High Blood Pressure

Floater

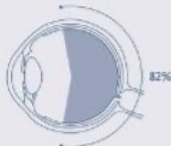

**Immediate imaging results during your exam. Provides a health record baseline for future annual exams.**

## Optomap Retinal Exam

optomap Retinal Image  
200°

Fundus Camera View  
approx. 45°

**\$32 Co-Pay associated with scan.**

**Insurance will not cover scans unless the doctor finds pathology to medically bill your insurance.**
